

Damon-Eshbach dispersion | $M_0 = x$, $k = y$ | $t = 10$ nm, $B_0 = 0.1$ T

15 unique FEM samples from the accepted root aggregate, prior ± 10 window points and Γ selection.

QUALIFICATION: NOT VERIFIED

FEM scatter and continuous n=0 references

Green crosses are an independent open-air 1D thickness reference, not FEM; boundary mismatch at $k=0$ is not discretization error.

Γ #227 is selected-only; prior ± 10 are frequency-window points; +15 uses restart30 after a rejected initial attempt (provenance in receipt).

Profile/topology reciprocity PASS: 15 profiles, 14 pairs, min overlap²=0.999030; manifest/serial/parallel parity, spectral completeness and convergence NOT VERIFIED.
